

Please make sure the battery is installed correctly, as shown below.

- 1) The battery needs to be charged in time at around 3.7V. When the charging is completed, the battery voltage is about 4.2V.
- 2) Turn off the power switch of the expansion board during charging.
- 3) The charging device indicator lights up red, and the indicator light turns green when fully charged. As shown below.

- 4) If you do not use it for a long time, you should unplug the battery cable. Because even if it is in standby, the battery will be worn out.
- 5) If you have not used it for a long time, you need to fully charge the battery before using it next time.
- 6) After charging is completed, the charger and power supply should be unplugged in time to avoid overcharging and damaging the battery.
